

Hrishi Tailor

+1 (647) 720-7519 | tailorhrishi@gmail.com | [linkedin.com/in/hrishitailor](https://www.linkedin.com/in/hrishitailor) | Waterloo, Ontario

SKILLS & QUALIFICATIONS

Languages: Java, JavaScript, Python, Swift, HTML/CSS

Frameworks & Libraries: Spring Boot, React, JPA/Hibernate

Developer Tools & Platforms: Git, PostgreSQL, REST APIs, Xcode, Render, Vercel, VS Code

Customer-Facing & Communication: Consultative selling, objection handling, client relationship management, public speaking to mixed audiences, translating technical concepts for non-technical audiences

EDUCATION

University of Waterloo

September 2025 - December 2030

Bachelor of Mathematics, Honours Mathematics (Undeclared)

Waterloo, Ontario

- President's Scholarship of Distinction (\$2,000)
- Clubs: Stocks Club (PR & Partnerships Executive), Pure Math/APCO Club, CS Club, Data Science Club

PROJECTS

Tailor Cards: Full-Stack E-Commerce Platform for Independent Card Business

Ongoing

github.com/hrishi-tailor/Tailor-Cards | tailorcards.com

- Built a full-stack e-commerce platform for a personal card business using Spring Boot (Java 21), PostgreSQL, and React, deployed live with a custom domain (Render + Vercel)
- Designed a relational schema with JPA/Hibernate (Product, Category, CartItem entities) and implemented the DTO pattern with Java records to decouple the API contract from the persistence layer
- Built a layered REST API with paginated endpoints, global exception handling via `@RestControllerAdvice`, and a persistent guest cart using session-based identifiers
- Configured Spring Security to protect administrative write endpoints while keeping browsing and cart operations public, and resolved CORS/deployment networking across a multi-service cloud architecture

EXPERIENCE

Founder

September 2024 - Present

Tailor Cards

Hybrid

- Built and scaled a trading card reselling business from the ground up, sourcing inventory through a network of supplier relationships and generating \$11,000+ in revenue across 123 transactions since launch
- Managed end-to-end business operations solo such as sourcing, pricing, inventory, and sales while using Excel to track revenue, margins, and stock across the full catalog
- Identified a scaling bottleneck in manual, in-person sales and independently taught myself full-stack development (Spring Boot, PostgreSQL, React) to build a production e-commerce platform and solve the problem directly

Coding Instructor

June 2026 - September 2026

Boswin Robotics

Mississauga, Ontario

- Designed and built a full coding/robotics curriculum (Python, Java) from scratch, translating technical programming concepts into clear, structured lessons for 200+ students
- Broke down abstract programming logic into step-by-step problem-solving, turning disengaged learners into independent builders including one student who went from refusing to participate to building a full Python game solo
- Collaborated with 1 new instructor to standardize curriculum delivery, ensuring consistent technical instruction across the program
- Communicated technical progress to non-technical parents in clear, jargon-free terms which is the same skill required to work across engineering and business teams

Advanced Math/Science Tutor

September 2022 - June 2025

Self-Employed Tutoring Practice

Mississauga, Ontario

- Grew a tutoring practice from 0 to 12 recurring students and \$6,000+ in revenue through referrals alone, managing the full client lifecycle independently
- Applied structured, analytical problem-solving across Calculus, Physics, Chemistry, and university-level Linear Algebra the same logical rigor used in debugging and system design
- Diagnosed the root cause of a student's academic struggles and rebuilt their foundational understanding, taking them from failing to 87% the largest turnaround among clients
